### LAUNDERING INSTRUCTIONS

Dry cleaning is the acceptable cleaning method for gloves of 100% KEVLAR® fiber with leather palms. Some differences in shrinkage, weight loss, yarn tensile strength, and color related to staining or the cleaning method may be seen, but there is no significant impact on cut resistance up to 30 cleaning cycles (without industrial use between cycles). Thirty cleaning cycles is considered to be more than can be expected because of normal wear.

### WARNINGS

- \*Gloves are cut resistant - not cut proof. Extreme caution should be used around moving machinery.
- \*\* Laundering gloves that have been in contact with toxic or corrosive chemicals may result in a chemical reaction, including fumes, that could cause personal injury, serious illness or death.

*This information is provided as a guideline for product use. The end user is solely responsible for determining the suitability of a particular glove for a specific application and the length of time in which such glove may be safely used.*
