## fend-all PURE FLOW<sup>1000</sup>® EMERGENCY EYEWASH STATION

The Pure Flow 1000® is a self-contained, gravity-fed emergency eyewash station that delivers Eyesaline®, a purified solution formulated to establish pH and isotonicity for safe, effective use. The station provides a constant flow rate for the full 15 minutes. Its ergonomic design allows for no obstructions in flushing basin, and sturdy arm rests provide support during flushing. Pure Flow 1000® eliminates a potential safety hazard of fluid disposal by capturing the waste flushing fluid. It measures 30H x 29W x 22-1/2"D and includes wall mounting bracket and 8 x 10" vinyl eyewash sign. Flow rate meets ANSI Z358.1 Standard.

### eyesaline®

**Pure Flow 1000®** houses two Eyesaline® cartridges. Each contains 3-1/2 gallons of Eyesaline®. The cartridges, hoses and nozzles are one replaceable, integral unit. This guarantees a non-contaminated Eyesaline® wash. The cartridges are safety sealed and last 24 months (four times longer than any other refill solution) unless activated prior to expiration.

The unique **Pure Flow 1000®** nozzle design provides a gentle "ribbon" of Eyesaline® at an ambient temperature for the entire 15-minute wash cycle, ensuring maximum comfort for workers. Eyesaline is contaminant-free, pH-balanced, and formulated to the salinity of human tears; therefore, it provides a safer, more comfortable wash than tap water.

The two required **Pure Flow Eyesaline® Solution Cartridges** must be ordered separately. Each cartridge contains 3-1/2 gallons of solution, and has expiration date as well as lot number imprinted on it. Each cartridge includes nozzle assembly and delivery hose.

The **Pure Flow 1000® Weather Cover** protects the emergency eyewash station from rain and airborne particles, and it is made of a reflective material to keep the eyewash solution cool in direct sunlight. It fits snugly around the activation handle, so the station is activated exactly as if it had no cover.
