ALTERNATIVE POWER

PV 10 Propane Vacuum

Ruwac's Alternative Power Series PV 10 Propane Vacuum is performance and portability at its finest. Designed for maximum versatility, the Propane Vacuum is ideal for applications that require all the performance of a rugged, high quality vacuum without the restrictions of cords and plugs.

Featuring heavy duty casters and an ergonomic frame, our PV 10 offers complete portability. A sturdy base and full handle bar provide easy maneuverability over rough terrain and to remote locations.

At Ruwac, we understand that functionality is key. That's why our vacuums offer a filter shaker assembly and a foot-actuated drop down dustpan for easy cleaning. Just shake, step, pull and empty. Regular cleaning practices allow for prolonged filter life and improved vacuum performance.

If you're working with fine dust or powders, you need filtration you can depend on. Each of our Propane Vacuums is equipped with an oversized, state-of-the-art MicroClean filter that's 99.9% efficient at .5 micron. Our MicroClean filtration technology increases productivity by allowing longer vacuum cycles and less filter maintenance. For applications that require absolute filtration, we also offer extra large, DOP tested and certified HEPA filtration assemblies, that are 99.99% efficient at .3 micron.

For reliability and performance, trust in Ruwac. Applications without power? It's no problem for our Alternative Power Series PV 10 Propane Vacuum.

Technical Data	PV 10
Horsepower	17 Hp
Vacuum Pressure	136" H2O" / 10 Hg"
CFM	300
Filter Area	28 sq. ft.
Inlet	2.75"
Dustpan capacity	9 gallon

FEATURES

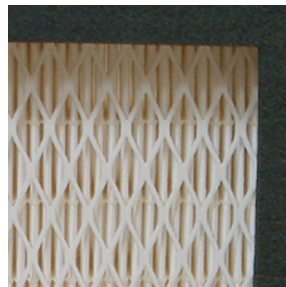

Heavy duty self-locking casters

MicroClean filtration

Fiberglass reinforced housing

HEPA option

Dust-free emptying
