

Part # AW58

HYDRO-KINETIC UPHOLSTERY TOOL

The *Hydro-Kinetic™ Upholstery Tool* remains the industry standard for high volume cleaning. Its unique design produces a high-velocity shearing action to efficiently remove soil from the fabric. It is unsurpassed in cleaning ability and fast drying times.

Conventional upholstery cleaning tools have by-passed the cleaning power of modern equipment because of a fear of over-wetting. The *Hydro-Kinetic* allows you to use a higher solution pressure and a more effective vacuum pressure to achieve maximum cleaning without the fear of over-wetting.

The *Hydro-Kinetic* has an open port vacuum chamber that allows the full kinetic force of cleaning solution to pass over and across the fabric, not through it. It eliminates over-wetting and overspray, even under the highest water flow conditions.

Clean Fast - With Confidence

- Patented design allows for the spray angle to produce a greater shearing action to remove soil from the fabric
- Greater solution flow reduces heat loss
- Open port vacuum chamber allows the full kinetic force of cleaning solution over and across the fabric, not through it
- Clean faster with no extra dry passes required
- Eliminates over-wetting and over-spray even under the highest water flow conditions
- Complete control over cleaning solution flow
- Interchangeable no-mark head design

The Technology Behind the Hydro-Kinetic Upholstery Tool

Hydro-Kinetic tool allows no water through the fabric.

Other brands saturate the pad underneath the fabric.

Conventional upholstery tools flow solution directly into the fabric cushion and backing, causing wicking, over wetting and potential fabric bleeding. The *Hydro-Kinetic* tool has a special fabric chamber design where the angle of the spray across the fabric produces a high velocity shearing cleaning action. The specially designed open port vacuum chamber allows the full kinetic force of cleaning solution across the fabric, not through it. You clean faster and more effectively, with no extra dry passes required. This too gives you complete control over cleaning solution flow and eliminates over wetting and over spray, even under the highest water flow conditions.

Safety and Performance:

- Works well in corners, edges and tight spots
- Works at any angle, even upside down
- Teflon® plate ensures smooth glide while protecting fabrics and trim
- Avoid wicking, browning, and bleeding
- Excellent at microfiber cleaning
- Rugged powder-coated steel head
- 8' hose and internal solution line with swivel cuff
- Control solution flow with ergonomically designed trigger valve

What People Are Saying About The Hydro-Kinetic Upholstery Tool

"As a trainer, I spend most of my class time helping students understand the balance between safety and performance when choosing an upholstery cleaning method. With the Hydro-Kinetic Tool, you won't need to make that choice! The powerful cleaning/shearing action of the tool flushes the most stubborn soils from the fabric, yet minimizes wetting to the back of the fabric, resulting in rapid dry times with little risk of bleeding or browning."

Jim Pemberton, Pemberton's Cleaning & Restoration Learning Center
